

Neckarsulm August 2022

Dear Sir or Madam,

Thank you for your enquiry regarding the topic of sustainability.

Kohler is a medium-sized trading company with well-known suppliers. We have been certified by TÜV Süd for over 10 years in the areas of quality (economy), environment (ecology) and occupational health and safety (social aspects). (Certificate see under our website: <https://kohler.de/zertifikate/>)

The topic of sustainability plays a central role for Kohler. On the one hand, to influence and shape ecological and social aspects as positively as possible, and on the other hand, to remain competitive in the long term.

We have set ourselves the goal of being climate-neutral by 2035.

In the coming months, we will continue to work on our key environmental aspects and, for example, reduce the amount of plastic in our packaging to an absolute minimum. Through the continuous improvement process of our management systems, energy/CO2/waste reduction projects are initiated and implemented every year.

We pass on the corresponding requirements regarding sustainability (especially in the areas of ecology and social issues) in our supply chain and demand them accordingly (Supplier Code).

As we are not a manufacturer in the true sense of the word, we are dependent on information from our suppliers to create a CO2 footprint of the parts we sell. The determination of the corresponding Scope3 emissions is planned for the future.

Head of Supply Chain Management

i.V. Thomas Pasquale Barbara
